The Local Government District Information Handbook for Mohale's Hoek provides essential data on the socio-economic aspects of the District, disaggregated Council wise. The broad objective of this database is to assist Local Government, Government Ministries, NGOs, community groups, individuals and others to understand the socio-economic status and profile of each of the Community Councils so that they can partner better with the Local Government. This information is provided to facilitate informed decision making at District and Community Council level while at the same time informing the national Local Government database, at a subsequent stage. We hope that this Handbook will become a reference information book for all information pertaining to Local Government in this district.

The information is presented in the form of tables providing statistical and descriptive information of the Councils. These include data on the general profile of the Councils, social indicators, gender issues, and information about selected sectors, namely, agriculture, trade, health, HIV & AIDS, education, water, roads, communication, energy, environment etc. □

The local government elections, held for the first time in Lesotho in 2005, led to the establishment of 128 Community Councils, 10 District Councils and the Maseru Municipal Council with about 1508 Councillors. Each Council has indirectly elected Chairpersons and Vice Chairpersons as well as a number of Standing Committees for specific purposes. The process of Administrative deconcentration and integration at the District level is coordinated by the District Administrator who represents the interests of Central Government in the district. The process of political and service decentralisation is being managed on a day to day level by the District Council Secretary. Each District and Community Council has a Local Government Service staff compliment to assist in the operations of the councils. A number of staff from about nine Line Ministries, who perform functions that have been decentralised to Local Government, is assigned to work under a designated Council □

The process of development of this Handbook has been coordinated and supervised by Department of Planning, Ministry of Local Government and Chieftainship (MOLGC). The following data collectors were engaged and worked under the supervision of Community Council Secretaries (CCSs) to collect data: Teboho Toai, Leoatle Hlabana, Fooso Kesi, Motsieleli Mafatlane, Liteboho Mahula, Thabo Matela and Rethabile Seleokane. Engagement of Data collectors and technical design of the process was supported by German Technical Cooperation GTZ. This information was collected using a CC Fact Sheet (Annex 1) whose respondents were the councilors and their support staff. A detailed or intensive household survey was not employed. This is a first attempt at collating key information trends aggregated as per CC boundaries. This information will be revised through updating, and subsequently validated against other secondary data sources, especially from the concerned sectors at the district level □
