

Triangular Co-operation with Latin America and the Caribbean: A forward-looking modality for a globalised world

WEBINAR ORGANISED BY BMZ AND GIZ

14 MAY 2020

NADINE PIEFER-SÖYLER

POLICY ANALYST

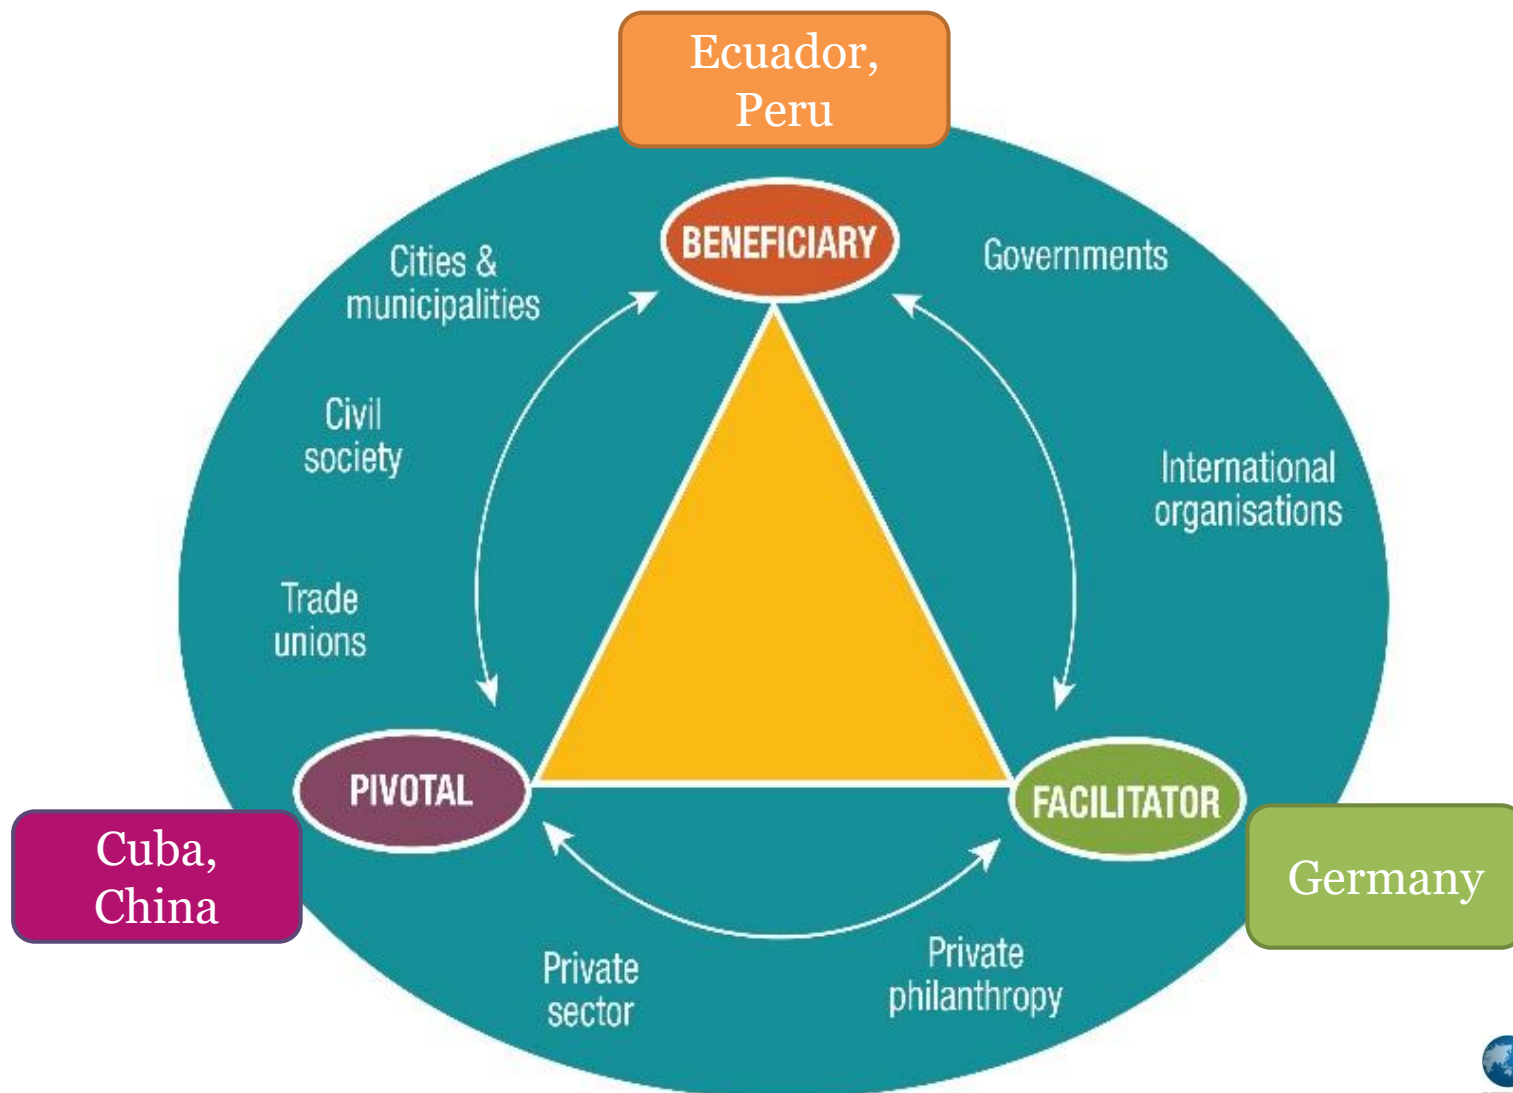

FORESIGHT, OUTREACH AND POLICY REFORM UNIT

OECD DEVELOPMENT CO-OPERATION DIRECTORATE

What is triangular co-operation?

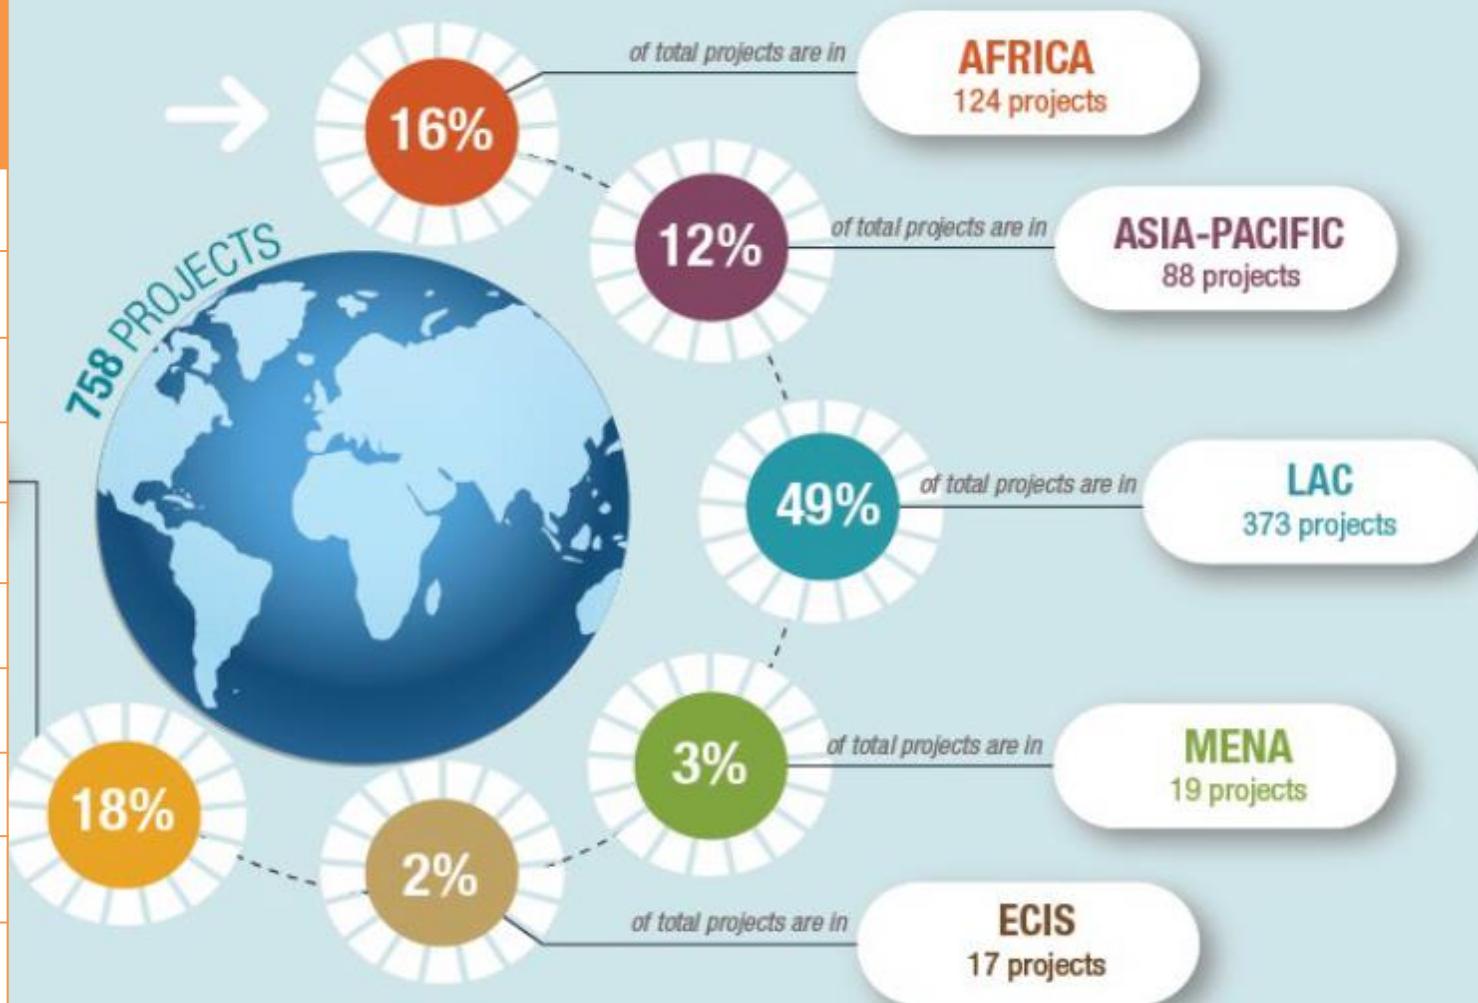

Triangular co-operation is on the rise

Top 10 countries

- Germany
- Chile
- Mexico
- Japan
- Guatemala
- Spain
- Brazil
- Colombia
- United States
- El Salvador

Lessons from Latin America and the Caribbean

- Regional integration around international co-operation issues strong in LAC (CEPAL, SEGIB, PIFCSS)
- LAC partners demand triangular co-operation because they see it as:
 - strong in finding innovative ideas and solutions;
 - good in scaling-up and adapting experiences to different contexts;
 - leveraging resources – small funds can go very far in having a big developmental impact;
 - a fertile ground for learning for co-operation agencies;
 - building ownership and trust.

Building the evidence base and collecting data

Triangular co-operation in times of COVID-19

Triangular co-operation taps into the experience and expertise of leading health, environment, agriculture and climate research institutes around the world.

In times of global crises, these triangular partnerships can help to share the knowledge and data which is needed:

- 12% of the overall 2012-18 triangular co-operation projects target health.
- In line with envisioning a ‘green’, green triangular co-operation represents 34% of all triangular co-operation projects for the period 2011-18.

A mindset shift is needed...

... moving from a project-based approach to perceiving triangular co-operation as investments in partnerships to provide global public goods.

“The other rationale for further trilateral projects is that China continues to have substantial development experience that is relevant to other developing countries, and China has a role to play in providing global public goods (such as infectious disease control).”
