

# Approaches for and effects of tackling the triggers of violence-induced displacement

in the context of the APSA and AGA: The contribution of German development cooperation

Lidet Tadesse

21 March, 2018

*ecdpm*

## Outline:

1. Objectives and methodology
2. Triggers of violence-induced displacement
3. APSA and AGA response to violence-induced displacement
4. Observations and suggestions for German development cooperation

# 1. Objectives and methodology

## Objectives of the study

Explore in-depth the links between AGA and APSA activities, and whether and how these reduce or alter the triggers of violence-induced displacement

- a. Clarify the concept of ‘tackling triggers of violence-induced displacement’
- b. Conceptualize how AGA and APSA activities relate to these triggers
- c. Investigate through case studies contributions of AU and RECs to reducing triggers of violence-induced displacement
- d. Explore the role of German development cooperation

# Methodology

## Phase I: Conceptual Framework (Desk research)

- What are triggers of violence-induced displacement?
- How can AGA and APSA interventions relate to them

## Phase II: Qualitative analysis

- How are AGA/APSA actors responding to triggers
- What is the contribution of German cooperation?
  - **Case studies:** Burundi, South Sudan, Boko Haram
  - Desk research
  - About 50 semi-structured interviews with a variety of stakeholders

## **2. Triggers of violence-induced displacement**

# Triggers of violence-induced displacement

Scope: Immediate triggers of violence induced displacement

Fear of individual persecution

Armed/violent conflict

Generalized violence

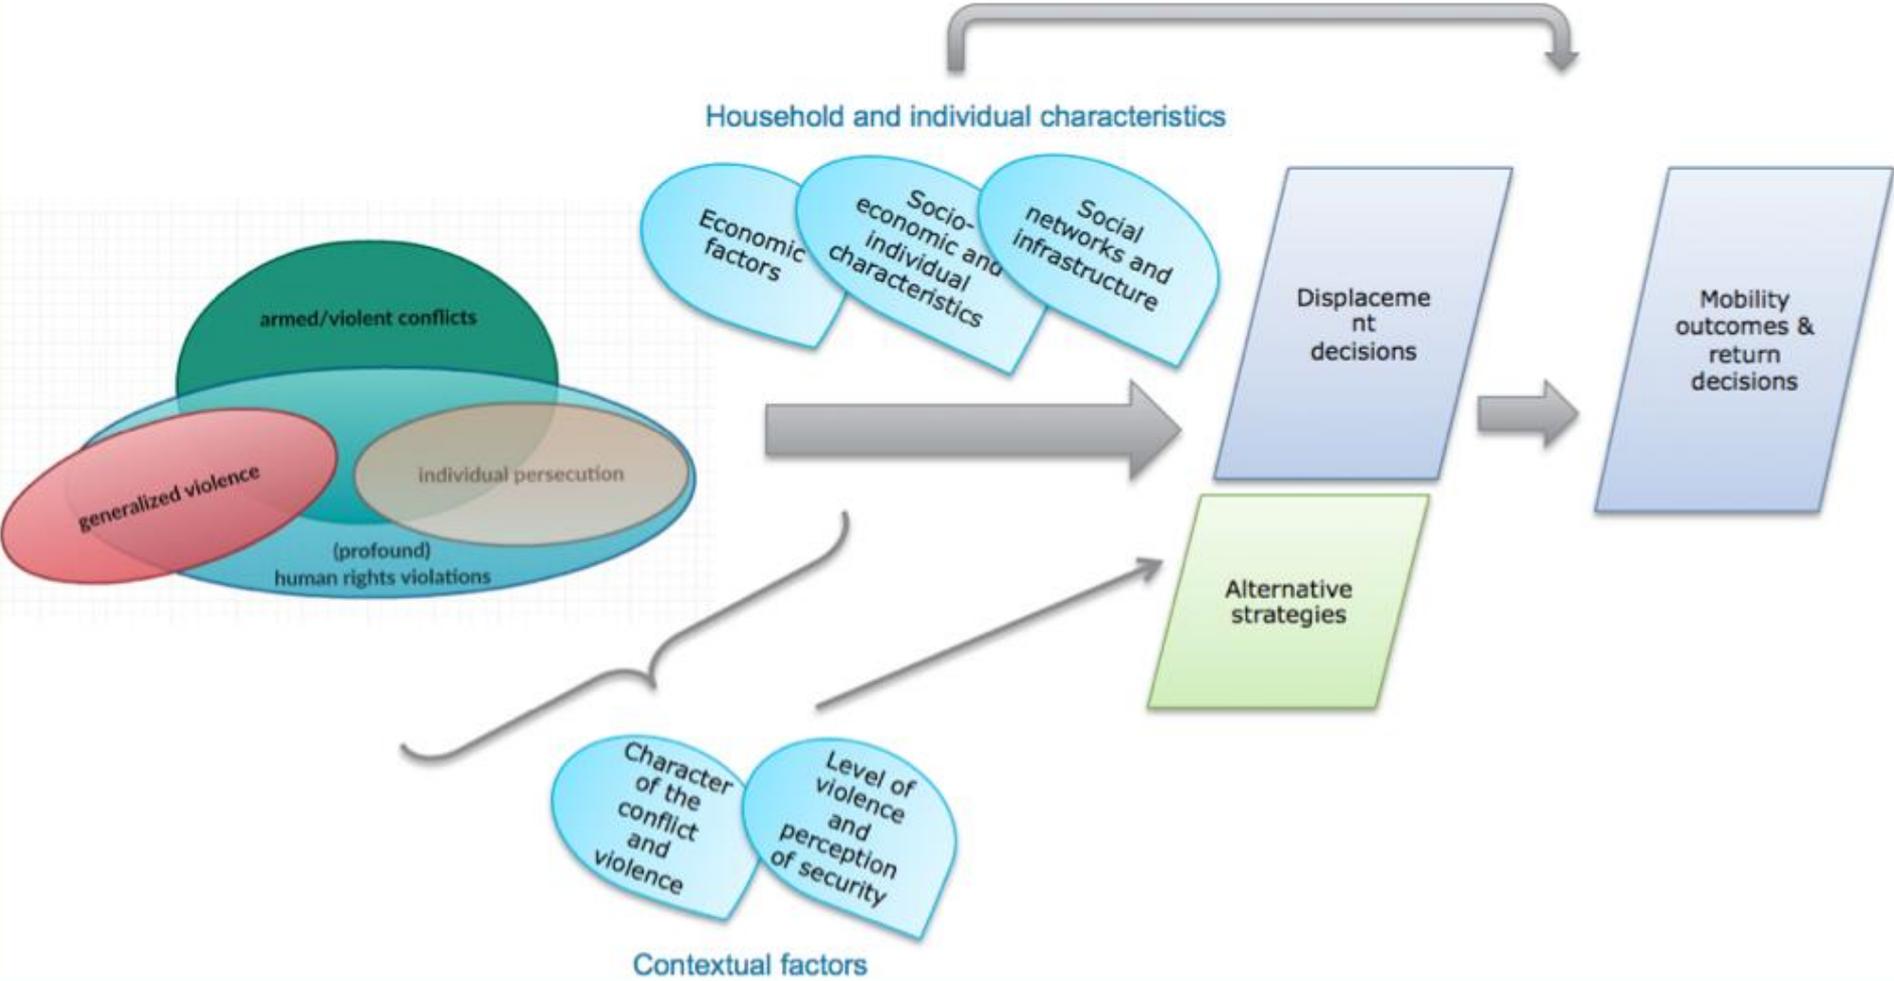

Profound human rights violations

→ Yet mediated by a number of factors:

a) **contextual** factors

b) household/**individual** characteristics

# Factors influencing decisions to flee

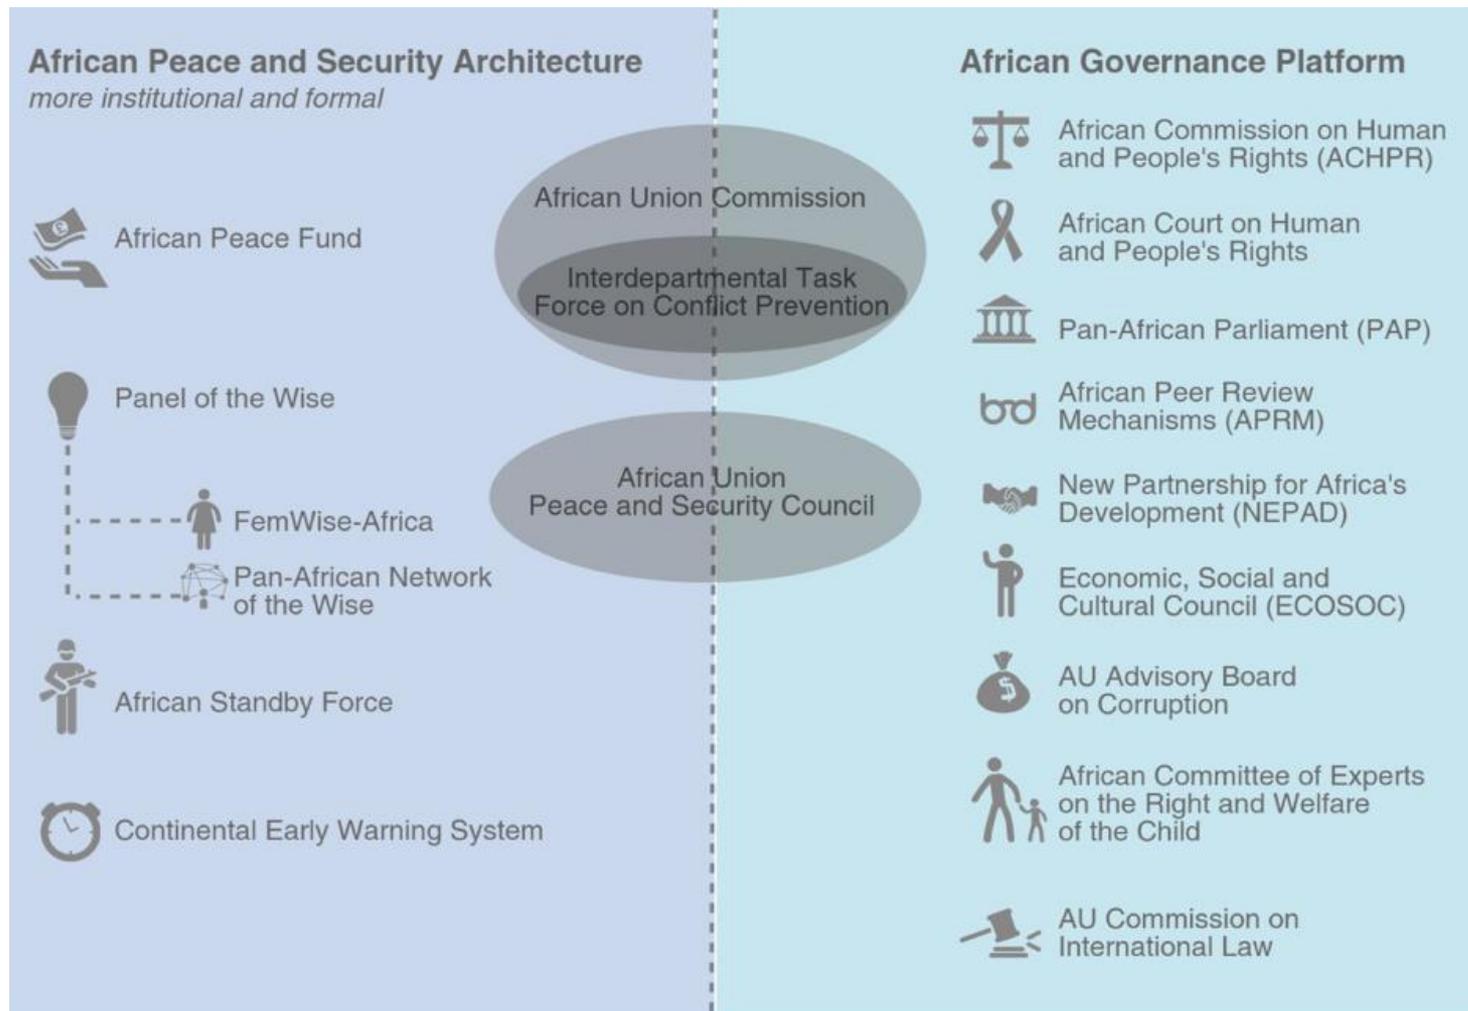

## Type of violence and displacement

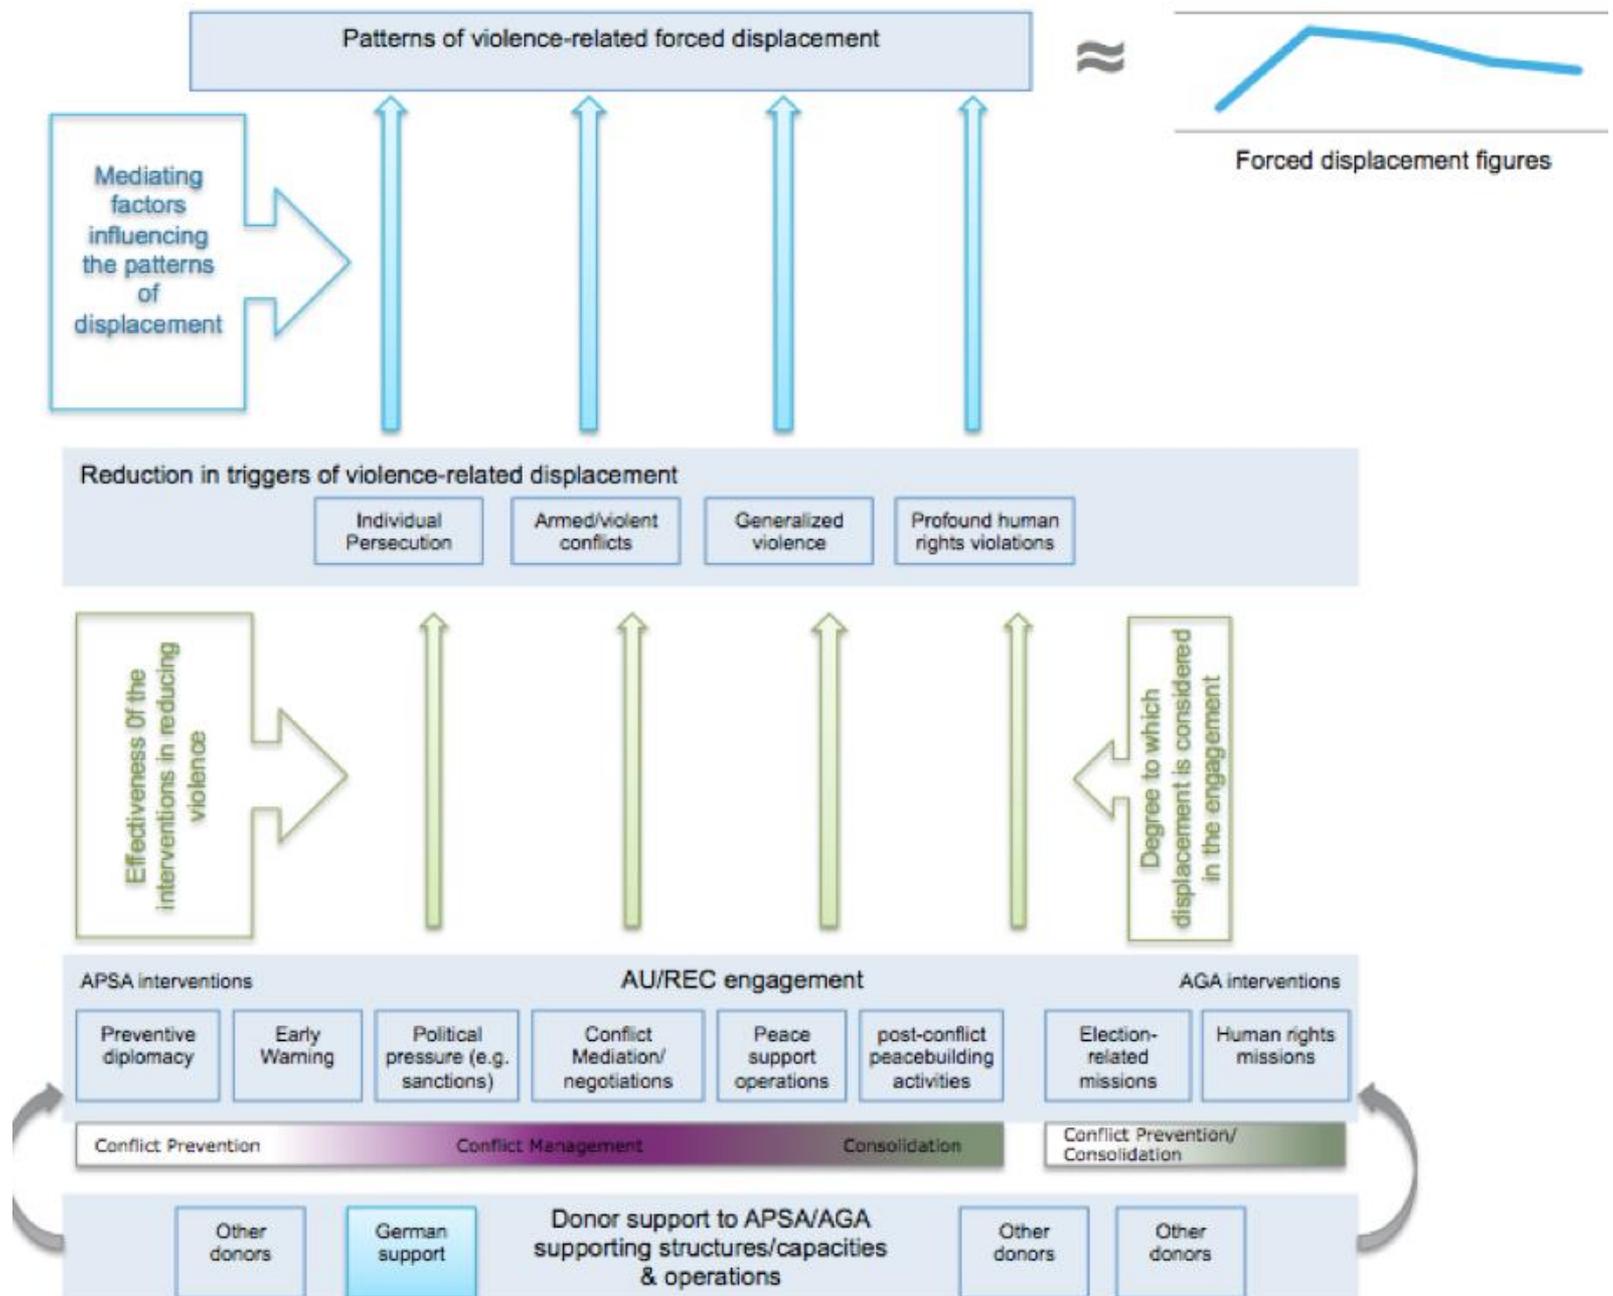

- Violence and displacement: positive correlation
- Violence **major factor** driving displacement:
  - Targeted state violence → international refugees
  - Targeted violence with intention to displace
  - Dissident violence/civil warfare → internally displaced, internationally displaced
  - Genocides/ Politicides → population segment targeted
  - Human Rights violations → accelerates displacement
- Indirect effects of violence also drive displacement

# **3. APSA response to violence-induced displacement**

# APSA/AGA responses to violence-induced displacement

*Institutional overlap between APSA/AGA (Desmidt et al. ECDPM, 2017)*

*AU/REC engagement in relation to triggers of violence-related forced displacement*

# Key takeaways from case studies

## APSA interventions and impact on displacement patterns

- Boko Haram - MNJTF military mission: overall positive effect on reducing immediate triggers of violence-induced displacement, but effect on long-term?
- Burundi: MAPROBU had potential but politicized, Human rights observers: limited positive effects
- South Sudan: displacement (refugees) patterns stagnated during IGAD mediation (2014-2016), yet overall no strong effect on displacement triggers
- APSA early warning, when coupled with “political will” have preventive impact (i.e. ECOWAS in Gambia)

## Key takeaways

### **APSA intervention to counter triggers of displacement does not automatically mean less displacement figures on the ground**

- Political realities beyond APSA
- Mismatch between APSA intervention (high-level) and micro/local conflict realities (i.e. South Sudan)
- Nexus between violence and other drivers of displacement (e.g. food insecurity, livelihood in South Sudan, link with Boko Haram, etc.)
- Justice and accountability, history of violence (are structural in nature but influence decision to leave or return, i.e. Burundi and South Sudan)
- Interventions' negative spillover (i.e. highly militarized counter-responses to Boko Haram)

## **4. Observations and suggestions for a possible way forward**

## Suggestions

- a. Strengthening exchange between different bodies of APSA and monitoring outputs for adaptive learning;
- b. Synergizing APSA-AGA bodies and interventions in **action** to respond to nexus between human rights, governance and peace and security;
- c. Emphasizing civilian protection mandates, activating policing and civilian dimensions of PSOs;
- d. Strengthening the link between (micro) realities and decisions; between primary stakeholders and decision makers;
