

WA+ Added Values and the potential for AI

Water Accounting Plus:

- 1 Overcomes data scarcity
- 2 Offers unparalleled spatial coverage of water information
- 3 Support data-driven decision making (Water budgeting, water investment planning...)

Water account dashboards support resilient water planning and investment by providing decision-makers with integrated, real-time data on water availability, use, and demand across sectors and regions. They help identify inefficiencies, risks, and trade-offs, enabling evidence-based allocation, early warning for scarcity, and prioritization of investments where impact and resilience can be maximized.
